Table No. 43

Name of Table : AC\_EPIC

Description of Table : Some Basic information on EPIC Scheme in AC at the time of issue of Guidelines

1.	ST_CODE	Character	3	State/UT Code
2.	AC_NO	Numeric	3	AC No.
3.	OLDCARDS	Numeric	6	No. of electors issued EPICs in the AC under the old scheme
4.	ENGROLLANG	Logical	1	Y (Yes) if English is one of the languages of the electoral roll; N (No) otherwise

Table No. 44

Name of Table : AC\_EPIC

Description of Table : Details of EPIC series allotted to an AC  
(For each EPIC Series allotted to an AC there will be one record in this table.)

Field No.	Field Name	Type	Size	Annotation
1.	ST_CODE	Character	3	State/UT Code
2.	AC_NO	Numeric	3	AC No.
3.	SERIES_NO	Numeric	1	Series No. of the new EPIC series (3-character alpha code) in the State/ UT. This will be 1 for all ACs to start with. As and when a new series for an AC is assigned by the Commission, new records would be added in this table, and the value of this field would then be assigned as 2, and so on.
4.	SERIES_ID	Character	3	EPIC Series ID : 3-character alpha code for the AC to be used as the prefix for the EPICs to be issued. For the first new series (i.e. for SERIES_NO=1), this will be the same as the FUSN Code already given to the AC and used in General Elections of 1998 and 1999.
5.	ECIORDERNO	Character	20	Order No. of Commission vide which the EPIC Series ID is assigned for the AC
6.	ECIORDERDT	Date	8	Date of the Order of Commission vide which the EPIC Series ID is assigned for the AC
7.	SRZSTRSL	Numeric	6	Starting Serial No. for this series of EPIC under new Unique EPIC numbering scheme for the first series allotted to the AC. A block of serial nos. starting from 1 will be reserved for assigning correspondence/ reference numbers to EPICs already issued using the old numbering system. The last no. of this reserved block should be rounded off to the next multiple of 1000. Thus, if 32345 EPICs have already been issued under the old numbering system, the value of this field will be 33000. The number to be used for giving EPIC No. to the first card under the new numbering scheme in the AC will then be 33001. For the second and subsequent series this will have the value 1.

19

Name of Table : AC\_EPIC

Description of Table : Details of EPIC series allotted to an AC  
(For each EPIC Series allotted to an AC there will be one record in this table.)

Field No.	Field Name	Type	Size	Annotation
8.	MAINBLKSNO	Numeric	6	The lowest unallotted Serial No. in the main block of serial nos., i.e. excluding the numbers available from the chunks unutilised by the field units on a certain date. This will be same as the value in field 8 when the scheme is relaunched under the comprehensive guidelines. However, this will change soon after the first block of numbers starting with this are utilised by allocation in lots to vendors and to the computer unit at the permanent centre in the district. As soon as, say, 2000 numbers are thus allocated, this number will be incremented by 2000 and the date on which this is done will be the date to be reflected in the next field.
9.	DT_AVLBL	Date	8	Date on which the above-mentioned Serial No. becomes available for the first time. Initially, this will be the date on which the first value is populated in the previous field. This will change as indicated in the annotation of the previous field.

**Note:** In many States, the district computer facilities (computer units - CU) have already been made operational. It is expected that photography and on-line issue of cards will be carried out there throughout the year. Further, it is envisaged that these can act as link centres for off-line production of cards either during the operation and maintenance phase or during special campaigns for some of the off-line DPLs. In some of the States, particularly NCT of Delhi, computer units have also been established at sub-district level for different EROs. Therefore, the above coding scheme of DPL\_IDs has to take into account these facts including possible setting up of facilities in future and have a consistent coding system.

In order to avoid any conflict/ confusion, the district or the sub-district computer unit will have the first DPL number for the AC in which the DPL building is physically located. Therefore, for all ACs the first

number should permanently be reserved for such a facility either already available or likely to be set up in near future.

Thus, in Andhra Pradesh in Srikakulam District, the district computer centre will have the following ID: AP-016-DPL-0001. Here, 16 is the AC No. for Srikakulam Assembly Constituency and it is presumed that the district computer unit is physically located in Srikakulam Town, which is part of Srikakulam Assembly Constituency. Similarly, in all ACs, the first number, i.e. 0001 of the code portion, is allotted to the district/ sub-district computer unit which has been set up or will be set up later.

In the unlikely event of 2 or more permanent computer units being located within the same AC, the initial serial no. (from 0001) will be allotted to these units.

**ANNEXURE-21: NUMBER SYSTEM FOR EPIC AND CHECKSUM DIGIT CALCULATION**

The system of number the EPICs was changed in May 2000. This system which is being followed since May 2000 is shown graphically below: -

1. AAA / 999999 C
2. One digit check-sum
3. Six digit running serial number from 000000 to 999999. Since the database is centrally maintained the numbers which have already been used for making EPIC for that constituency can be read from the database and the next available number is used. This ensures that a number once used in an EPIC is never reused.
4. Three upper case alpha character prefix of the EPIC number as an identifier assigned to the Assembly Constituency (Parliamentary Constituency in UTs where there is no Assembly). These are called the FUSN (Form Unique Serial Number) codes. For ready reference the FUSN codes for each constituency are enclosed with these guidelines. If all the numbers from 0 to 999999 have been exhausted for a constituency, the CEO should request the Commission to assign a new FUSN code for that constituency. After a new FUSN code has been assigned the numbering can restart from 000000.
5. Check Sum Digit Calculation - The single digit check sum will be generated by the standard software used to prepare the EPIC and will be appended to the six digit running serial assigned in continuation so that it appears to form part of the number itself. The calculation of the check sum digit will be done using the LUHN Formula (Mod 10).The steps required to calculate the check digit are given below.
  - a. Step 1: Add the first, third, and fifth digit.
  - b. Step 2: Double the second, fourth and sixth digits and add the individual digits comprising the products.
  - c. Step 3: Add the results of Steps 1 & 2. If the number is divisible by 10 then the check sum digit is zero. Else the check sum digit is the difference between the total obtained in this step and the next higher multiple of 10.
  - d. These steps are illustrated through a few examples. To calculate the check digit for the six digit serial number 102679, the steps are:
    - e. Step 1: Add the first, third, and fifth digit. In the above case  $1+2+7=10$ .
    - f. Step 2: Double the second, fourth and sixth digits and add the individual digits comprising the products. In this case  $0*2=0$ ,  $6*2=12$ , and  $9*2=18$ . Adding the digits in the products  $0 + (1+2) + (1+8) = 12$ .
    - g. Step 3: Add the results of Steps 1 & 2. If the number is divisible by 10 then the check sum digit is zero. Else the check sum digit is the difference between the total obtained in this step and the next higher multiple of 10. In this case it is  $10+12=22$ . Thus subtracting from the next higher multiple of 10 gives  $30-22=8$ . The check digit is 8.
6. Again, for the serial number 102683, the check sum digit would be calculated similarly:
  - a. Step 1: Add the first, third, and fifth digit. In the above case  $1+2+8=11$ .

- b. Step 2: Double the second, fourth and sixth digits and add the individual digits comprising the products. In this case  $0*2=0$ ,  $6*2=12$ , and  $3*2=6$ . Adding the digits in the products  $0 + (1+2) + 6 = 9$ .
- c. Step 3: Add the results of Steps 1 & 2. If the number is divisible by 10 then the check sum digit is zero. Else the check sum digit is the difference between the total obtained in this step and the next higher multiple of 10. In this case the  $11+9=20$  which is divisible by 10. Hence the check sum digit is 0.
